

AP Calculus AB

Summer Assignment

Part 1:

Go to www.khanacademy.org/join to create an account.

Enter the class code **QBBBZMQU**.

I highly suggest logging in with Google, using your school account, but you can create your account with your personal email.

You will need to complete the practice exercises in the "Getting Ready for AP Calculus" course. Your goal will be to reach mastery.

Part 2:

You must know your Unit Circle. I have included a blank one for you to practice on. I advise making copies or going to EmbeddedMath.com and printing off several blank Unit Circles. You will be expected to recall values from the Unit Circle from memory. You will need to be able to use these values to find trig values for any angle on the Unit Circle.
